The present sequence represents a cat cauxin protein (I) or its salt, CC which is cat kidney disease marker. Also described: (1) a partial peptide CC (II) of (I); (2) a nucleic acid (III) encoding (I) or (III); (3) a vector CC (IV) comprising (III); (4) a transformed host (V) comprising (III) or CC (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) CC disease which involves measuring (I) quantitatively, and where reduction CC of amount of (I) indicates presence of the disease; (8) a cat kidney CC disease diagnostic agent comprising (I) labelling agent, a reagent which CC describe the biological activity of urinary (I) or (VI); and (9) a cauxin CC detection kit which measures cauxin in a test sample. (I) is useful as a CC disease. (I) enables detection of cat kidney disease simply and correctly. (I) provides an early marker for the disease, and replaces CC complicated diagnostic methods such as X-ray imaging, ultrasonic imaging, complicated diagnostic methods such as X-ray imaging, ultrasonic imaging,
                                        blood testing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel cauxin protein or its salt, useful as a cat kidney disease marker, and for diagnosing cat kidney disease.

Secreted proteins and polynucleotides useful as vaccines for preventing or treating various diseases e.g. cancer, wounds, atherosclerosis, Parkinson's disease, Alzheimer's disease, infection, autoimmune disorder

Claim 1(a); Page 315; 335pp; English.

The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The activity of polypeptides of the invention may be described as, cCC cycostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, cCC neuroprotective, immunosuppressive, haemostatic, antinflammatory, cCC cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, and metabolic. Polypeptides and polymucleotides of the invention are cueful in the treatment, or as a vaccine in the prevention of, cancer, cCC wound healing disorders, infection, atherosclerosis, Parkinson's disease and Alzheimer's disease, autoimmune disorder, haematopoietic disorder, inflammation, neoplastic diseases, nervous system related disorders and cardiovascular disorders, pancreatitis, respiratory disorder, cCC hyperproliferation, systemic autoimmune disease, hyper-immunity, cardiovascular diseases, mervous system related disorders, cCC hyperproliferation, systemic autoimmune disease, hyper-immunity, cardiovascular diseases, mervous system related disorders, cCC haematological diseases, mervous system related disorders, cCC haematological diseases, mervous system related, thyroid developmental abnormality, gastrointestinal ulceration, neuropathy, cardiovascular, et abolic diseases, sperm dysfunction, thyroid disorders e.g. hypothyroidism, brain damages, colitis, cone photoctransduction deficiency, neurological diseases, stroke, angiogenesis,

BAYER

Disclosure; Fig 8; 92pp; English.

The invention relates to a purified human carboxylesterase-like enzyme CC polypeptide. Carboxylesterase-like enzyme and its DNA are useful for CC screening for agents which decrease or modulate the activity of carboxylesterase-like enzyme polypeptide. Carboxylesterase-like enzyme is useful for treating a carboxylesterase-like enzyme discompounds that increase the ability of human carboxylesterase-like enzyme compounds that increase the ability of human carboxylesterase-like enzyme compounds are useful as detoxifying agents. CC carboxylesterase-like enzyme agonists and antagonists are useful for creating osteoporosis, Paget's disease and degradation of bone implants, CC diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases or abnormalities related to the presence of coding sequence of carboxylesterase-like enzyme before coding sequence of carboxylesterase-like enzyme polymucleotide is useful in gene therapy and for generating antisense oligonucleotides or carboxylesterase-like enzyme polymucleotides or carboxylesterase-like enzyme polymucleotides or carboxylesterase-like enzyme polymucleotides are useful for modulating carboxylesterase-like enzyme gene expression. The present sequence is rat carboxylesterase-like enzyme gene expression. The present sequence is rat carboxylesterase-like enzyme protein

                                                                                                                                                                                                                                                                                                                                                                                                                   Sequences AAF21614 - AAF22031 represent DNA sequences encoding human CC proteins AAB59171 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the CC sequences AAF22032 - AAF22040 and AAB59129 which are used in the CC invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nontropic; antinflammatory; antiulcer; vulneray; anticonvulsant; antidabetic; antifulgal; antiparastic and cardiant activity. The polynucleotide and CC antifungal; antiparastic and cardiant activity. The polynucleotide and CC breast and ovarian cancer. The nucleic acid sequences, proteins, agonists of immune disorders e.g. Addison's diagnosis, prevantion and treatment CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative colhris; cardiovascular disorders such as myocardial ischaemias; wound healing; infarriance disorders such as cerebral anoxia and epilepsy; and
                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 549
                                                                                                                                                                                                                                                                                                                                                                            No.:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and

A55281

Carboxylesterase (EC 3.1.1.1) egasyn - mouse

N;Alternate names: beta-glucuronidase endoplasmic reticulum-targeting protein; esterase-
C;Species: Mus musculus (house mouse)
C;Accession A55281
C;Accession A55281
R;Ovnic, M.; Swank, R.T.; Fletcher, C.; Zhen, L.; Novak, E.K.; Baumann, H.; Heintz, N.;
A;Title: Characterization and functional expression of a cDNA encoding egasyn (esterase-
A;Reference number: A55281
A;Reference number: A55281; MUID:92147141; PMID:1783403

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.
